Sayak Karmakar

Frontend Developer

Durgapur, India • Remote-friendly • codewithsayak@gmail.com • github.com/codewithsayak

PROFILE

Self-taught frontend developer building fast, accessible interfaces with HTML, CSS and vanilla JavaScript. I care about semantic markup, responsive layout and the small details that make a page feel finished. Comfortable taking a feature from wireframe to deployment, and currently open to junior frontend roles, internships and freelance projects.

SKILLS

Languages	HTML5, CSS3, JavaScript (ES6+)
Practices	Responsive design, semantic & accessible markup (WCAG), performance optimisation, CSS architecture
Tooling	Git, GitHub, VS Code, Browser DevTools, Vercel, Figma (basics)
Learning	API integration, progressive web apps, accessibility audits

SELECTED PROJECTS

Developer Portfolio

HTML · CSS · JavaScript

Config-driven personal site with light/dark themes, project filtering, instant search and an accessible details dialog, built without frameworks or a build step.

Gradient Lab

JavaScript · CSS variables

Visual gradient editor supporting linear, radial and conic modes with live preview, draggable colour stops and one-click CSS copy.

QR Code Generator

JavaScript · Canvas

Client-side utility that generates downloadable PNG and SVG QR codes instantly — no network requests, no tracking.

JavaScript Arcade

Canvas · Game logic

Retro brick-breaker with a delta-time game loop, hand-written collision detection, scoring and keyboard/touch controls.

EXPERIENCE & LEARNING

Independent projects & open source

2024 — Present

- Design and build complete frontend projects from scratch, published openly on GitHub.
- Work with semantic HTML, modern CSS layout, ES6+ JavaScript and browser APIs.
- Refactor and document each project as if it were going into a team codebase.

Self-directed frontend study

2024 — Present

- Studied responsive design, accessibility and performance through documentation and practice.
- Built progressively more complex interfaces, from static pages to interactive applications.

HOW I WORK

- Ships in small, reviewable increments with clear commit messages.
- Tests across breakpoints and checks keyboard and screen-reader paths before calling work done.
- Comfortable in async, remote teams; documents decisions so others can pick up the work.

AVAILABILITY

Open to junior frontend roles, internships and freelance work. Remote-friendly; replies within 24 hours.
